

Governed Analytics through OAS

What is OAS?

Oracle Analytics Server brings the modern, industry-leading capabilities of Oracle Analytics Cloud to organizations that require on premise deployments.

Enterprise Semantic Models

OAS enables you to use Oracle BI Administration tool for semantic data modelling.

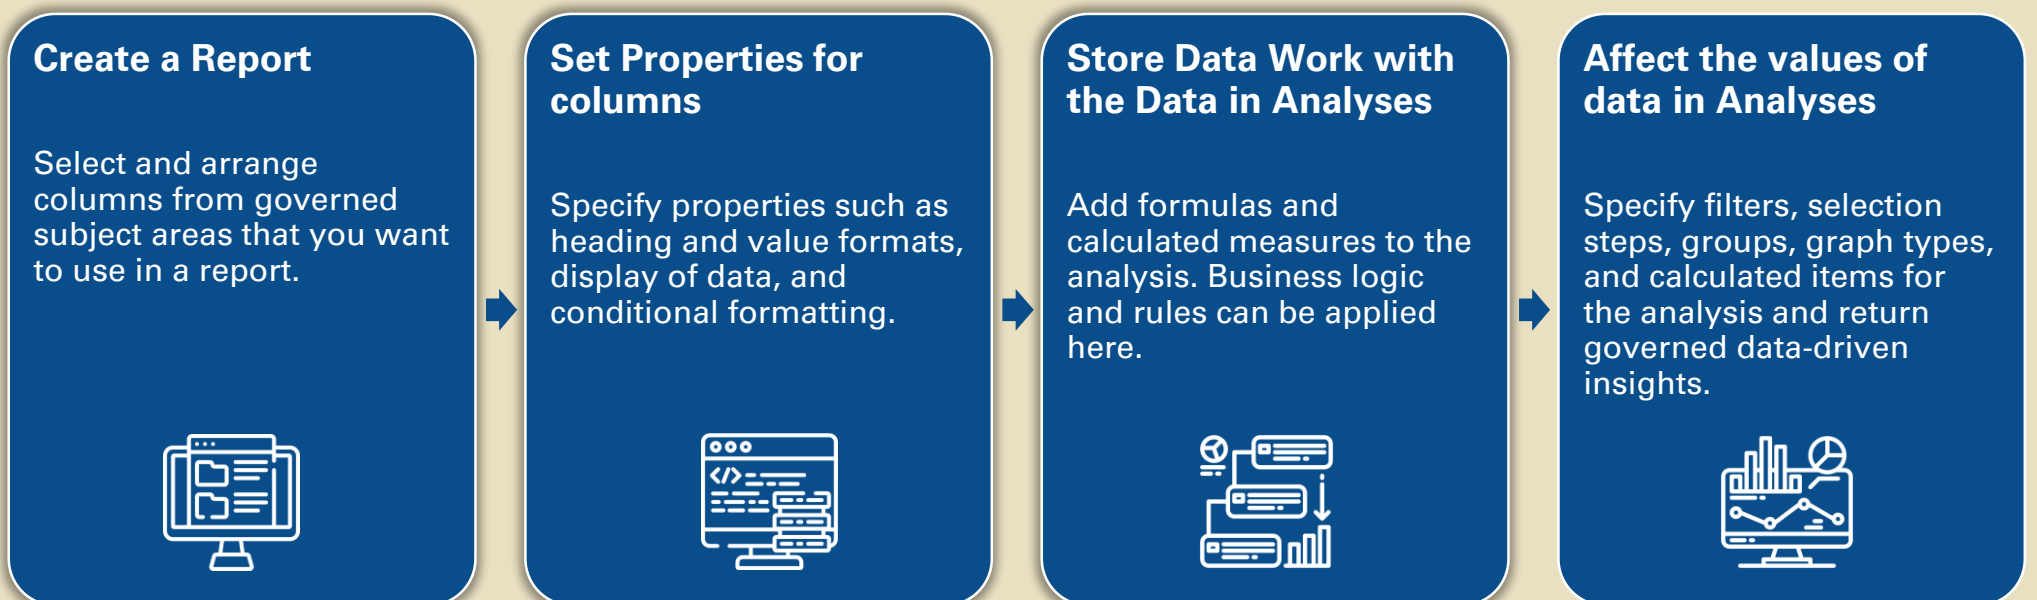

OAS Key Features

- Governed Analytics
- Self Service Analytics
- Augmented Analytics
- Natural Language Processing

Identify Hidden Insights

Business data insights can be pulled in graphical format through analyses, by creating reports or dashboards.

Typical workflow to create governed analytics in OAS

Supports Multiple Data Sources

OAS allows you to explore multiple datasets in graphical format within a single interface. Whether flat files, DB or app connections.

Dashboard Empowers Data

Dashboard embeds web contents or documents, displays accessible images, analyses results, text, link to websites & documentation.

All Analyses in One Place

Dashboards enable you to access and disseminate complete & consistent view of organization across departments and multiple data sources.

Pixel Perfect Reports

Pixel Perfect reporting through BI publisher is still available in OAS. You can design and publish pixel perfect reports in various templates.

Role Based Access Control

OAS enables to assign access to the catalog & dashboard items depending on user's role. Data can also be filtered by role if necessary.
